Seed collecting and native tree planting

Regis and Skillset Land Works teams recently completed another round of seed collecting from trees on Regis-owned properties near Kings Plains.

Environmental staff visited a number of sites during June and July, collecting thousands of seeds from trees including:

- **Manna Gum**
- **Apple Box**
- **Yellow Box**
- **Broad-leaved Peppermint and**
- **Red Stringybark.**

Planting 100,000 trees across the Blayney Shire

The native seeds will be propagated and returned to Regis as tube stock.

The tube stock will be ready for planting in Autumn 2024 at the McPhillamys site and on neighbouring properties.

The Regis tree planting program aims to plant over 100,000 native trees in the Blayney Shire over the life of the McPhillamys Gold Project.

For more information about the Regis tree planting program or any other aspect of the McPhillamys Project, feel free to contact us.
